Omnilink Systems Announces Covert Surveillance Solution for Law Enforcement Agencies

Solution Covertly Tracks Vehicles or Stolen Goods Even Where GPS Does Not Work

ATLANTA (October 30, 2007) – Omnilink Systems, a leader in location-based services technology (LBS), today announced the general availability of its covert surveillance solution for law enforcement agencies. Omnilink provides LBS solutions that go beyond the traditional GPS-based offerings to provide the real-time location of people and valuable assets, even where GPS solutions do not work.

Omnilink's covert surveillance solution, a combination of a small tracking device and Omnilink's FocalPoint software, gives law enforcement the ability to easily and covertly track vehicles or stolen goods during criminal investigations. While traditional GPS-based surveillance products lose track of goods or vehicles whenever they move out of the line-of-sight of global positioning satellites, Omnilink's covert surveillance solution works anywhere. Through a combination of GPS and cellular technology, the Omnilink covert surveillance solution can track outdoors and indoors, and thus provides a way for law enforcement officers to follow the movement of tracked property constantly, anywhere it goes.

Law enforcement agencies use Omnilink's covert surveillance solution in several ways. Using a magnet mount, the tracking device can be easily installed in seconds under vehicles for covert vehicle tracking. Officers can then follow a vehicle in real time using Omnilink's web-based FocalPoint software, while capturing its location history for evidentiary purposes.

The solution can also be used to investigate suspected cases of organized retail crime involving high-value consumer goods. Investigators, working in conjunction with a retailer's loss prevention or asset protection department, can insert the Omnilink tracking device into the packaging of products being used for undercover retail crime investigations. Detectives can then track the movement of the goods to uncover organized crime activities, such as gangs of professional shoplifters.

"To be effective investigators must know the whereabouts of a target constantly, even if it goes indoors, such as into a warehouse or a parking garage," said Curtis Rapp, vice president of judicial sales for Omnilink Solutions. "We're pleased to be able to extend our solutions for the law enforcement community to include a covert surveillance solution that goes beyond the capabilities of traditional GPS to track a target anywhere it goes."

About Omnilink Systems

Omnilink Systems provides the real-time location of people and valuable assets through unique location-based services technology that goes beyond traditional GPS. The company's judicial solutions are transforming offender monitoring by providing officers with immediate visibility to offender locations anytime, anywhere. Government agencies across the country

rely on Omnilink Systems' single-unit solutions to effectively manage offenders in a variety of alternative sanctions programs. Through our network of value-added solutions partners, Omnilink's commercial solutions provide the real-time location of people and critical assets when their safety and security are of paramount importance.
